Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

[What is covered by the international preliminary examination among claims 1-5 and 8-12]

The "resins having acid groups" that are particularly supported in the specification are only the resins obtained by copolymerizing (meth)acrylic acid as a monomer, a monomer having a hydrophobic group and a polyether-based monomer, and the other resins having acid groups are not particularly disclosed, and hence are not supported at all.

Therefore, it is not considered that the pigment ink compositions containing any "resin having acid groups" other than those particularly disclosed are sufficiently supported in the specification, and no significant opinion can be presented on them.

So, the international preliminary examination covers only the pigment ink compositions containing any of the resins obtained by copolymerizing (meth)acrylic acid as a monomer, a monomer having a hydrophobic group and a polyether-based monomer, as the "resin having acid groups."
